

Method for

Preparation of a liquor of tea for use in sensory tests —

[ISO title: Tea — Preparation of liquor
for use in sensory tests]

UDC 663.953.1:620.192.65/.67

Cooperating organizations

The Food and Agriculture Standards Committee, under whose direction this British Standard was prepared, consists of representatives from the following:

Agricultural Cooperation and Marketing Services
 Agricultural Research Council, Meat Research Institute
 British Food Manufacturing Industries' Research Association
 British Industrial Biological Research Association Ltd.
 Campden Food Preservation Research Association
 Consumer Standards Advisory Committee of BSI
 Department of Agriculture and Fisheries for Scotland
 Department of Agriculture (Government of Northern Ireland)
 Department of Industry (Laboratory of the Government Chemist)*
 Flour Milling and Baking Research Association
 Food and Drink Industries' Council
 Food Manufacturers' Federation Incorporated
 Institute of Brewing
 Local Authorities Coordinating Body of Trading Standards
 Ministry of Agriculture, Fisheries and Food*
 National Farmers' Union
 National Farmers' Union of Scotland
 Tobacco Advisory Council

The organizations marked with an asterisk in the above list, together with the following, were directly represented on the Technical Committee entrusted with the preparation of this British Standard:

British Tea Producers' Association
 Oversea Development Administration — Tropical Products Institute
 Tea Trade Committee

This British Standard, having been prepared under the direction of the Food and Agriculture Standards Committee, was published under the authority of the Executive Board and comes into effect on 31 October 1980

National foreword

This British Standard has been prepared under the direction of the Food and Agriculture Standards Committee. It is identical with ISO 3103-1980 *“Tea — Preparation of liquor for use in sensory tests”*, prepared by sub-committee 8, Tea, of Technical Committee 34, Agricultural food products, of the international Organization for Standardization (ISO). The UK provides the secretariat for the sub-committee.

Terminology and conventions. The text of the international standard has been approved as suitable for publication, without deviation, as a British Standard. Some terminology and certain conventions are not identical with those used in British Standards; attention is especially drawn to the following.

Wherever the words “International Standard” appear, referring to this standard, they should be read as “British Standard”.

The comma has been used as a decimal marker. In British Standards it is current practice to use a full point on the baseline as the decimal marker.

Cross-reference

International standard	Corresponding British Standard
ISO 1839:1980	BS 5987:1980 Methods for sampling tea (Identical)

A British Standard does not purport to include all the necessary provisions of a contract. Users of British Standards are responsible for their correct application.

Compliance with a British Standard does not of itself confer immunity from legal obligations.

Summary of pages

This document comprises a front cover, an inside front cover, pages i and ii, pages 1 to 4, an inside back cover and a back cover.

This standard has been updated (see copyright date) and may have had amendments incorporated. This will be indicated in the amendment table on the inside front cover.

1 Scope and field of application

This International Standard specifies a method for the preparation of a liquor of tea for use in sensory tests, by means of infusing the leaf.

2 Definitions

For the purpose of this International Standard, the following definitions apply.

2.1

liquor

the solution prepared by extraction of soluble substances from dried tea leaf, under the conditions described

2.2

infused leaf

tea leaf from which liquor has been prepared

NOTE In the tea trade in the United Kingdom, the term "infusion" is used with the meaning of 2.2, but, to avoid confusion with the more general usage of this word, the expression "infused leaf" has been used.

3 Reference

ISO 1839, *Tea — Sampling*.

4 Principle

Extraction of soluble substances in dried tea leaf, contained in a porcelain or earthenware pot, by means of freshly boiling water, pouring of the liquor into a white porcelain or earthenware bowl, examination of the organoleptic properties of the infused leaf, and of the liquor with or without milk or both.

5 Apparatus

5.1 Pot, of white porcelain or glazed earthenware, with its edge partly serrated (see Figure) and provided with a lid, the skirt of which fits loosely inside the pot.

5.2 Bowl, of white porcelain or glazed earthenware.

NOTE Various sizes of pot and bowl can be used, but it is recommended that one of the two sizes shown in the annex, and depicted in the figure, be adopted.

6 Sampling

See ISO 1839.

7 Procedure

7.1 Test portion

Weigh, to an accuracy of $\pm 2\%$, a mass of tea corresponding to 2 g of tea per 100 ml of liquor (i.e. $5,6 \pm 0,1$ g of tea for the large pot or $2,8 \pm 0,05$ g for the small pot described in the Annex) and transfer it to the pot (5.1).

7.2 Preparation of liquor

7.2.1 Preparation without milk

Fill the pot containing the tea with freshly boiling water¹⁾ to within 4 to 6 mm of the brim (i.e. corresponding approximately to 285 ml in the case of the large pot and 140 ml in the case of the small pot described in the Annex) and put on the lid. Allow the tea to brew for 6 min, and then, holding the lid in place so that the infused leaf is held back, pour the liquid through the serrations into the bowl (5.2) corresponding to the pot selected. Remove and invert the lid, transfer the infused leaf to it and place the inverted lid on the empty pot to allow the infused leaf to be inspected. In the case of fine, powdery dust grades, special care should be taken and a sieve may be required.

7.2.2 Preparation with milk

Pour milk free from any off-flavour (for example raw milk or unboiled pasteurized milk) into the bowl (5.2), using approximately 5 ml for the large bowl and 2,5 ml for the small bowl described in the Annex.

Prepare the liquor as described in 7.2.1 but pour it into the bowl after the milk, in order to avoid scalding the milk, unless this procedure is contrary to the normal practice in the organization concerned.

If the milk is added afterwards, experience has shown that the best results are obtained when the temperature of the liquor is in the range 65 to 80 °C when the milk is added.

While addition of milk is not essential, it sometimes helps to accentuate differences in flavour and colour.

NOTE When comparative tests are made using liquors prepared in accordance with 7.2.1 or 7.2.2, it is essential that the following be kept identical:

- the mass of the tea;
- the volume and type of water;
- the size and dimensions of the pots and bowls;
- the brewing time;
- the volume and type of milk (if used).

¹⁾ The flavour and appearance of the liquor are affected by the hardness of the water used. The water used for the test should therefore be similar to the drinking water in the area where the tea is to be consumed. In exceptional cases, for example when comparative tests are required to be made in different areas and it is not possible to procure similar waters or suitable ordinary water for this purpose, distilled water or deionized water may be used. It should be recognized, however, that the results will not then necessarily bear a true relation to the flavour of the liquor produced with ordinary drinking water, since the mineral salts in the latter may modify the flavour and appearance of the tea.

8 Test report

The test report shall indicate the method used, including the following details:

- the mass of tea used;
- the volume of water used;
- the duration of brewing, if other than 6 min;
- the source of the water (if relevant);

— whether or not the test has been carried out with milk and, if so, the volume and type of milk and whether it was added to the bowl before or after the liquor.

The test report shall also give all details required for the complete identification of the sample.

Annex Examples of pots and bowls for preparation of tea liquor

In the figure are shown two sizes of pots and the corresponding bowls which are in widespread use. Particulars not shown in the drawing are given below.

A.1 Pot

A.1.1 The maximum capacities, when the pots are filled to the partly serrated edge, are 310 ± 8 ml for the large pot and 150 ± 4 ml for the small pot.

The inside of the pot may be marked with a groove, or a coloured line, to indicate the volume of water which should be added.

A.1.2 The lid should be loose-fitting and provided with a small hole to allow air to enter when the liquor is being poured out of the pot.

A.2 Bowl

The maximum capacities are 380 ml for the large bowl and 200 ml for the small bowl.

NOTE The diameter of the bowl is such that the pot and lid can rest inside to drain off the liquor, and the angle of the inside surface of the bowl is such as to allow the taster an uninterrupted view of the liquor without shadow.

A.3 Tolerances

A.3.1 The tolerances shown in the figure apply to the pots and bowls in use, and it is recommended that tighter specification should be applied in manufacture.

A.3.2 The recommended masses are given below. These are considered necessary to obtain a reproducible temperature profile during the preparation of the liquor, and to eliminate variations in the temperature of consecutive samples during tasting.

Pot without lid:

large, 200 ± 10 g;

small, 118 ± 10 g;

Bowl:

large, 200 ± 20 g;

small, 105 ± 20 g.

See national foreword.

BSI — British Standards Institution

BSI is the independent national body responsible for preparing British Standards. It presents the UK view on standards in Europe and at the international level. It is incorporated by Royal Charter.

Revisions

British Standards are updated by amendment or revision. Users of British Standards should make sure that they possess the latest amendments or editions.

It is the constant aim of BSI to improve the quality of our products and services. We would be grateful if anyone finding an inaccuracy or ambiguity while using this British Standard would inform the Secretary of the technical committee responsible, the identity of which can be found on the inside front cover. Tel: 020 8996 9000. Fax: 020 8996 7400.

BSI offers members an individual updating service called PLUS which ensures that subscribers automatically receive the latest editions of standards.

Buying standards

Orders for all BSI, international and foreign standards publications should be addressed to Customer Services. Tel: 020 8996 9001. Fax: 020 8996 7001.

In response to orders for international standards, it is BSI policy to supply the BSI implementation of those that have been published as British Standards, unless otherwise requested.

Information on standards

BSI provides a wide range of information on national, European and international standards through its Library and its Technical Help to Exporters Service. Various BSI electronic information services are also available which give details on all its products and services. Contact the Information Centre. Tel: 020 8996 7111. Fax: 020 8996 7048.

Subscribing members of BSI are kept up to date with standards developments and receive substantial discounts on the purchase price of standards. For details of these and other benefits contact Membership Administration. Tel: 020 8996 7002. Fax: 020 8996 7001.

Copyright

Copyright subsists in all BSI publications. BSI also holds the copyright, in the UK, of the publications of the international standardization bodies. Except as permitted under the Copyright, Designs and Patents Act 1988 no extract may be reproduced, stored in a retrieval system or transmitted in any form or by any means – electronic, photocopying, recording or otherwise – without prior written permission from BSI.

This does not preclude the free use, in the course of implementing the standard, of necessary details such as symbols, and size, type or grade designations. If these details are to be used for any other purpose than implementation then the prior written permission of BSI must be obtained.

If permission is granted, the terms may include royalty payments or a licensing agreement. Details and advice can be obtained from the Copyright Manager. Tel: 020 8996 7070.
