## Theoretical Neuroscience:

Computational and Mathematical Modeling of Neural Systems
MIT Press ISBN 0-262-04199-5
Peter Dayan LF Abbott

## Errata to Second Printing

December 4, 2022

| Page | Location | Error | Scourge |
| ---: | :--- | :--- | :--- |
| 28 | line 14 of second paragraph | $N_{m}=\langle n\rangle \rightarrow N_{0}=\langle n\rangle$ | Philip Jonkers |
| 46 | second line after eq 2.2 | are identical $\rightarrow$take the same <br> mathematical forms | John van Opstal |
| 72 | eighth line of the caption to <br> fig 2.21 | $\alpha=20 \mathrm{~ms} \Rightarrow 1 / \alpha=20 \mathrm{~ms}$ | Sune Nørhøj Jespersen |
| 134 | eqn 4.29 | $p_{a}\left[r_{a}\right] \Rightarrow p\left[r_{a}\right]$ | Tatsuo Okubo |
| 181 | $5^{\text {th }}$ line below eqn 5.30 | The rise time is $1 /\left(\alpha_{s}+\beta_{s}\right)=0.9 \mathrm{~ms} ;$ we are <br> not employing the approximation of eqn <br> 5.28 that $\alpha_{s}>\beta_{s}$ | Sune Nørhøj Jespersen |
| 194 | The Connor-Stevens Model | the model we discuss is actually due to <br> Connor, Walter, \& McKown $(1977)$ | Sebastian Seung |
| 187 | last paragraph | all instances of $r$ should be $r$ | Tatsuo Okubo |
| 235 | eqn 7.6 | $\ldots v=F\left(I_{s}(t)\right)$ | Ming Hang |
| 238 | rightmost term in eqn 7.9 | $-\mathbf{v} \Rightarrow-v_{a}$ | Geoff Goodhill |
| 296 | $6^{\text {th }}$ line below eqn 8.22 | $N \Rightarrow N_{u}$ | Tatsuo Okubo |
| 296 | $3^{\text {rd }}$ line below eqn 8.23 | matrix $\Rightarrow$ vector | Tatsuo Okubo |
| 301 | $2^{\text {nd }}$ line below eqn 8.27 | $\mathbf{v} \Rightarrow v$ | Tatsuo Okubo |
|  | Exercise 2.14 | we are only interested in the spatial recep- <br> tive field of the LGN neuron, so the values <br> of $\alpha$ and $\beta$ are extraneous | Jack Kilgallen |
